

Vineet Kumar

+91-9892289514

Tech Lead - Architect (Software Engineering), AWS, Scrum Master

Healthcare, IoT, Social Media

Experience: 18+ Years

kmr.vineet@gmail.com

Availability: Immediate Joiner

<https://www.linkedin.com/in/vineet-kumar-65620b4/>

- Enthusiastic and experienced IT professional with a proven track record of success in system analysis, designing, product management, distributed systems and implementing cutting-edge technology platforms. Demonstrated leadership skills in managing and mentoring teams to deliver innovative solutions. Passionate about driving growth and achieving business objectives through strategic technology solutions. Adept at applying agile principles to deliver high quality features on time.
- Proven leader in managing teams, defining scalable architectures, and aligning technology with business goals to drive innovation and measurable outcomes
- Leveraged AI-assisted development (GitHub Copilot, Gemini, RAG, Claude, GPT 4 LLMs) to improve productivity and accelerate time-to-market

STRENGTHS

- Full stack experience, Java Backend, Web and Mobile App development, Cloud technology,
- Worked on various organization and different technology for different domains
- Worked in both product-driven and service-oriented environments

CORE COMPETENCIES

- Strong background in end-to-end SDLC, cross-functional leadership, and engineering excellence using SOLID principles, and automation
- Expert in Reverse Engineering, R&D, POC's, code review and best practices
- Requirement Analysis, System Architecture, Project Time and Cost estimation
- Performance Optimization, Multithreading, Profiling, High Availability, Concurrency,
- Strong expertise in multithreading, collections, OOPS, design patterns, and scalable backend systems.
- Java, Spring Boot, JPA, Android (Kotlin, MVVM, Clean, Jetpack), React Native, development
- PostgreSQL, SQL, Indexing, Query Optimization
- Security (JWT/OAuth2) best practices & Fault tolerance
- REST APIs, Microservices & Distributed Systems
- Data Structures & Algorithms

SKILLS

Core Java/Frameworks: Spring Framework, Security, Multithreading, Memory management, Concurrency

Programming Languages: Android (Kotlin), Java, JavaScript, TypeScript, Python, C++, C

Frontend Development: React.js, React Native, Android, iOS

Backend Development: Spring Boot, Node.js, Express.js, Java, JPA,

AI Agent (LLM's): Gemini, GPT 4, Claude, GitHub Copilot

Database & Storage: Redis, MongoDB, PostgreSQL, Optimization, Performance Tuning, Hibernate/JPA,

Messaging, Cloud & DevOps: Kafka, Docker, Kubernetes, AWS, CI/CD Concepts, Jenkins

Architecture & Design: Microservices, Event-driven, Clean Architecture, SOLID Principles, OOPS, Design Patterns, Data structure, Agile/Scrum

API's: REST APIs, Swagger

Tools & Platforms: Git, JIRA, Postman, Draw.io, CommView

CERTIFICATION

- AWS Certified Cloud Practitioner (Valid up to 2028)
- Scrum Master Certification (60291391491747)
- Java Certifications (Explorer & Professional)
- Professional Life Coach Certification & Guide (Accredited)

WORK EXPERIENCE

Tech Lead-V2 Solutions (P) Ltd. (Feb 2016 - Till now), Mumbai

- Successfully designed and implemented data streaming application capable of handling large volumes of data from IoT devices.
- Implemented scalable event-driven workflows and asynchronous processing patterns for high-concurrency systems.
- Participated in database schema design, SQL optimization, indexing strategies, and application performance tuning using PostgreSQL.
- Built an end-to-end automation pipeline capable of detecting production issues from Dynatrace and automating the issue fixing process to avoid manual intervention.
- Designed and developed Google Analytics integration to trace the user activity and app behaviour.
- Designed and developed the automation framework, using AI tools Gemini, GitHub Copilot.
- Worked across multiple domains, including FinTech, Healthcare, IoT, Social Media, and Real Estate
- Defined system architecture and drove end-to-end SDLC (estimation, development, deployment), ensuring high-quality and timely project delivery

Programming Design Manager- Aptara New Media (P) Ltd, Pune (Feb 2014 – Apr 2015)

- Analyzing RFP's, providing optimized solutions for development LMS's, CBT etc.
- Communication with the client and providing Time and cost estimates.

Tech Lead- Mobiuso Technologies (P) Ltd. (Mar 2013 - Jan 2014)

Lead Engineer- Geodesic Ltd. (Jan 2004 - Feb 2013)

Software Engineer- Qualsoft Infotech (Apr 2001 - Mar 2003)

Lecturer- Nice Management College (Nov 1998 - Dec 2000)

- Delivered comprehensive lectures for BCA and MCA programs over a 2-year period, enhancing students' technical knowledge and programming skills
- Designed and conducted interactive training sessions on system design and advanced programming concepts, leading to a 30% improvement in participants' project delivery efficiency.

PROJECTS

Error Tracing AI Component

- Designed and developed a scalable AI-powered error tracing and remediation framework using Python and React, improving execution efficiency and enhancing defect detection accuracy.
- Integrated multiple AI-driven agents, including Claude, Gemini, and GPT-4, enabling advanced root-cause analysis, automated debugging, and code remediation workflows.
- Developed a responsive frontend using React and implemented robust backend services in Python to support scalable automation and seamless AI-agent orchestration.

Healthcare Diagnostics App (HD medical)

- Designed a scalable real-time medical data processing system for ECG and heart sounds, enhancing data accuracy and responsiveness by 30%.
- Utilized Java, Android Studio, Kotlin, SQLite, Git, and Pivotal Tracker to streamline development workflows and ensure code quality and project management.
- Integrated Bluetooth-enabled medical devices to enable seamless, continuous data capture and live visualization on mobile platforms.

Fitness Never Sleeps – Social platform app

- Led development of Fitness Never Sleeps (FNS), a closed community enterprise app delivering fitness programs with interactive feeds, messaging, and exclusive video content, enabling 24/7 user engagement and seamless connectivity
- Utilized Java, Spring Boot, JPA, PostgreSQL, Git, and JIRA to streamline development workflows and ensure code quality and project management.
- Architected scalable system with robust data and networking layers ensuring fault tolerance, high availability, and efficient handling of rich multimedia workloads using modular, extensible components
- Built real-time communication features (authentication, messaging, conferencing) and optimized client-server data pipelines, improving sync performance by ~30% while ensuring low-latency, high-concurrency interactions and overall system reliability

Rolla Labs - Real Estate Media Platform

- Developed Rolla Labs mobile app for real estate agents enabling media capture, AWS-based uploads, and seamless video streaming to showcase property features with high user engagement
- Designed high-performance Android application (Android, Kotlin, GraphQL, SDK integrations) with scalable architecture, modular components, and efficient database and networking layers ensuring reliability, responsiveness, and maintainability

- Built scalable media ingestion and streaming pipelines with optimized resource utilization, while establishing engineering best practices (Git, Agile/Scrum, Pivotal Tracker), improving delivery velocity and code quality

Data Automation

- Designed a scalable automation framework using Appium, Python, and AI-driven agents (Gemini, GPT 4), significantly increasing execution efficiency, and defect detection accuracy.
- Implemented robust data extraction mechanism, driving R&D for advanced data scraping solutions across multiple event-driven applications, ensuring high resilience against dynamic UI and anti-scraping mechanisms.
- Leveraged Google Gemini LLM to build intelligent automation and conversational capabilities, improving user interaction and reducing manual effort.
- Utilized Appium Inspector and debugging tools to analyze failures and optimize automation scripts, reducing test execution errors by 25% and improving framework stability.

Guidelines

- Developed Android apps using Java, PostgreSQL, and Git, managed tracking via Mantis
- Architected scalable, fault-tolerant framework with analytics, push notifications, and core modules, improving engagement by 20%

Finance Calculators Suite

- Developed fintech calculator suite (React, TypeScript) for U.S. housing market, enabling users to evaluate mortgage options effectively.
- Designed and implemented accurate financial computation modules aligned with industry standards
- Delivered key tools (Affordability, Buy vs Rent, Amortization) and optimized algorithms, improving calculation accuracy by ~15%

FindCenter Platform (Full-Stack)

- Led development of scalable full-stack platform (React, TypeScript, Node.js, Express, MongoDB) using microservices architecture, enabling modular design and independent deployments
- Built personalized content system with feeds, categories, bookmarking, voting, and commenting, leveraging event-driven architecture for real-time, low-latency user interactions
- Designed for high RPS and concurrency using load balancing and horizontal scaling, while developing secure REST APIs and resolving performance bottlenecks to improve throughput, stability, and fault tolerance
- Built real-time, event-driven features (live data feeds) supporting low-latency interactions.

Fleet Management System (Soteria)

- Developed scalable mobile applications (React, TypeScript, Node.js, SQLite) for vehicle transportation management, delivering reliable and high-performance solutions
- Designed real-time vehicle tracking and compliance architecture with shift and cycle management modules, improving operational transparency and driver log monitoring.
- Built reporting and monitoring systems for data analysis and compliance tracking, enhancing operational visibility and ensuring adherence to transportation regulations

Employee & Branch Onboarding Portal

- Developed Onboarding Portal, a centralized platform to streamline onboarding operations for individuals and branches, improving overall process efficiency
- Built scalable UI architecture (React.js, TypeScript) and implemented workflow automation and task management modules, increasing operational efficiency by 30%
- Led code reviews and managed Git branching strategies, improving code quality and reducing integration issues by 25%

Loan Servicing & Financial Systems

- Developed scalable mortgage web app (Vue.js, TypeScript, MongoDB), improving performance by ~30%
- Built high-performance modules (audio streaming, file downloads etc.) and optimized caching for high-concurrency systems, boosting responsiveness and team productivity by 25%
- Optimized data access and caching strategies, reducing latency and improving overall application throughput.

Client Proposal Development

- Gathered requirements and designed tailored enterprise solutions through stakeholder collaboration
- Developed proposals, timelines, and cost estimates, improving acquisition success by 25% and efficiency by 20%

Enterprise Messengers & Radio

- Built scalable enterprise messaging platform and improved organizational communication
- Reverse-engineered Yahoo/MSN/OSCAR/XMPP protocols and developed mobile radio streaming app boosting engagement

Montage Group File System

- Develop robust distributed file systems and high-performance storage modules.
- Engineered configuration management systems and automated testing tools, enhancing software reliability and deployment efficiency by approximately 20%.

EDUCATION

Master of Computer Applications (MCA), Kamla Nehru Institute of Technology (Sultanpur)

B.Sc. - Bachelor of Science | Mathematics (Meerut University, Meerut)
